## PLEASE CHECK ALL THAT APPLY

Pain which persists 6 months or more after injury or onset of symptoms, or any pain that persists beyond the anticipated time of healing is an indication of chronic pain per ODG, ACOEM and the Medical Treatment Utilization Schedule (MTUS) and should be referred for biopsychosocial evaluation and treatment. Additional symptoms and areas of intervention inherent in chronic pain may include:

Sadness/depression

Anxiety/panic/PTSD

Sleep complaints

Somatic complaints (e.g. abdominal/bowel)

Increased pain behaviors

Frustration with medical care

Feelings of helplessness/hopelessness

Elevated stress levels

Cognitive complaints

Frustration/anger

Failure to respond to treatment/delayed recovery

Functional complaints/disability

Excessive medication usage/requests

Weight gain/loss

Need for medication tapering/detox

Job dissatisfaction/lack of support

Verbal/physical/mental abuse
